

# FEATHER FLAG

## ASSEMBLY INSTRUCTIONS

Below is a step by step guide to assembling your feather flags.

1. Begin by laying out all the metal pole components for your flag. Identify the start and the end poles of the flag, which have black plastic ends.

2. Connect the poles together by lining up the connection points, pressing the button so that the smaller end of one pole fits into the larger end of the other and push the poles together until the button 'clicks' into place in the designated hole.

3. Open the end of the elastic sleeve and steadily pull the sleeve over the full length of the flag pole.

4. Slowly and evenly pull the flag taut, adjusting the screw pin at the bottom if necessary.

5. If using a plastic flag base...

Fill the flag base to the top with either water or sand, and screw the cap on the base firmly to seal in the contents. Make sure the base is positioned on firm and flat ground.

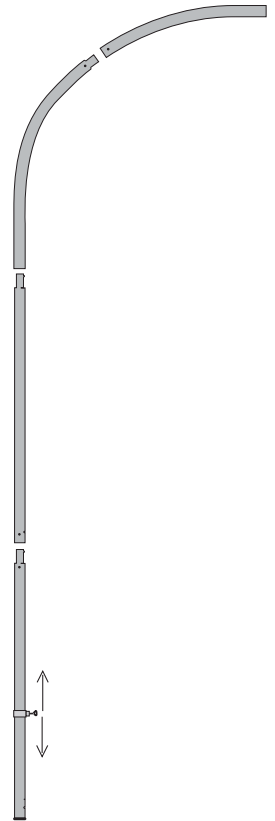

Drop the metal rod into the flag base and fasten in place.

If using a metal ground spike on soft ground...

Take your ground spike and position it firmly into the ground.

Do not hammer the top of the swivel point! This will damage the attachment. Instead, hammer on the top of the solid metal spike which goes into the ground. Always use gloves and safety glasses and exercise caution when using tools.

7. Finally, position your completed flag or that the flag can spin around 360 degrees wind.
