

How to apply

1.

Remove the protective film from both sides of the base and clear header panels- taking note of the sticker on the base which indicates which side the header panels should be inserted into.

2.

To assemble the unit, insert the header panels into their respective slots in the base.

3.

Inspecting the unit from each side and above; ensure there is no gap between the two panels at the top. If there is, simply rotate the panels around and re-insert them into the base accordingly so that they make contact at the top.

4.

Gently prise the panels apart by hand and insert your literature into the sign holder.

5.

Replace and update the artwork by repeating step 4 as frequently as necessary.
