

Included:

- 3 x Gridwall Panels

- 1 x Three Way Base

- Fixings

- 6 x Joining Clips

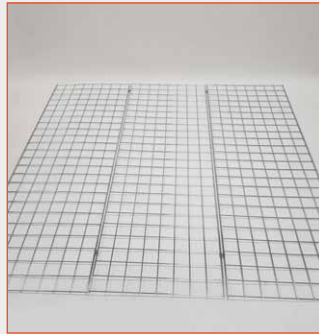

- Gridwall Components (dependant on kit purchased)

How to apply

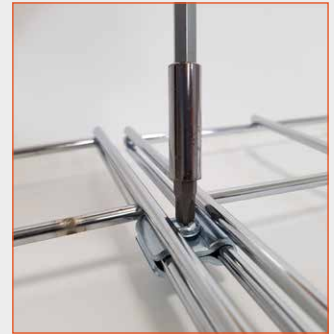

1.

Lay the three gridwall panels side by side approximately one inch apart (ideally on the floor).

2.

With the gridwall lay flat, connect the gridwall panels together using the joining clips; ensuring that you only tighten the screws finger-tight at this point. Maintain even spacing between the joining clips, and connect them to the lower outer rods on each gridwall panel.

3.

Flip the three connected panels upside-down so that the screw heads now face towards the floor (this may require two people).

4.

Lift up the two outer panels of the gridwall and join them at the top, before loosely connecting them together using the joining clips.

5.

With the three gridwall panels loosely connected in a triangular formation, lift them into the three way base (this may require two people).

6.

Adjust the position of each panel to best fit the recess in the base and then tighten the joining clips with a screwdriver to lock them in position.

7.

Gridwall hooks and accessories can now be fitted to the display.
